# Cast Iron Baseboard

Weil-McLain Snug Cast Iron Baseboards satisfy the standards of good engineering. It is essential for comfort that the cold outer wall be blanketed as extensively as possible with a source of heat, Weil-McLain baseboard panels most effectively fulfill this requirement.

Weil-McLain Snug Baseboard is available for use with existing or gravity systems. They are installed along the outer walls where their combination of radiant and convected heat neutralizes cold downdrafts from the windows as well as it warms the cold wall. Seamlessly solving the heating problem setup by the modern trend large glass areas.

## Uniform Room Temperature From Floor To Ceiling

Room temperature uniformity is one gauge of a heating system's desirability. Extensive experimental work shows that in a baseboard-heated home, the temperature differential between floor and ceiling averages about 3°—a much smaller difference than normally observed forced air systems.

Radiant baseboard panels warm the outside walls so that Mean Radiant Temperature (MRT, or weighted average of all room surface temperatures) remains nearly constant despite wide variations in outdoor temperature. This is a distinct comfort advantage, as the MRT of buildings heated by other means usually decrease as the outdoor temperature falls, necessitating a higher air temperature to offset the increased radiant heat loss of the occupants. Therefore, since the radiant heat emission of cast iron baseboards remains practically fixed, controlling the air temperature with an ordinary room thermostat is sufficient to maintain the proper relationship between radiant and convected heat for maximum occupant comfort.

## "Live Front" Radiates Heat

The sustained "live front" heating of Weil-McLain Snug Baseboards has an important bearing on comfort. The unusually large waterways and cast iron construction of these units provide a reservoir of stored heat which prevents a sharp drop in temperature when the thermostat shuts off the heat supply.

## Finned Rear Surface

For balanced heating, a portion of convected heat is necessary to supplement the radiant heat emission. Weil-McLain Snug Baseboards are well equipped, where the fins in the rear of the units provide an ample surface to emit warmed air.

## Simple, Attractive Design

Weil-McLain Snug Baseboards are distinguished by classic simplicity of design... neat, attractive corners and extension panels. They occupy a minimum of space.

## Air Vent Is Located In Best Position

This is an exclusive Weil-McLain feature. The air vent is located at the top of the baseboard—the best location for the efficient venting. It is easily accessible, yet does not interfere with the room decor.

# Cast Iron Baseboard Ratings

## No. 9 Snug Baseboard Panels\*

Panel Length Linear Feet	HOT WATER RATINGS IN BTU/HR.**

## Dimensions

NOTES:  
 3/4" NPT tappings  
 50 PSI maximum allowable working pressure  
 Water content is .33 gallons per foot

\*Ratings at 140 F and lower temperatures determined by multiplying 150 F ratings by the applicable factor specified in Table E "Baseboard Performance at low water temperatures" in the I=B=R Testing and Rating Standard for Baseboard radiation.  
 \*\*Ratings are assigned based on tests conducted in accordance with the I=B=R Testing and Rating Code for Baseboard Radiation and include the 15% allowance permitted by the Code. Ratings are based on active length which is the same as total length.  
 \*\*\*Snug Baseboard Panels are available in 6-inch increments. The capacity of 6-inch lengths can be calculated by adding 1/2 ft. rating to the even foot panel rating. Example: at 190° avg. water temperature, a 15 1/2 ft. No. 9 panel rating is 9600+320=9920 BTU/Hr.

## Maximum Baseboard Length For Gravity Hot Water

Pipe Size & Baseboard Location	Snug No.	Maximum Length of Snug Baseboard That May Be Used On 2-Pipe Gravity Hot Water at Various Temperatures*									
		215	210	205	200	195	190	185	180	175	170
1/2" First Floor	9	3	4	4	4	4	4	5	5	5	6
1/2" Second Floor	9	6	6	6	7	7	7	8	8	9	9
3/4" First Floor	9	8	9	9	10	10	11	11	12	13	13
3/4" Second Floor	9	12	13	13	14	15	15	16	17	18	19

\*Length of panels in linear feet.  
 The maximum permissible panel length refers to a single set of runouts. If two or more assemblies are connected in series and supplied by only two runouts, the sum of their lengths should not exceed the maximum shown in the table.

## Snug Baseboard Capacity Factors and Pressure Drop Data For Performance At Various Flow Rates (Including Pressure drop data for 3/4" steel pipe)

Flow Rate Lbs./Hr.	G.P.M.	Cw*	Pressure Drops (Millinches H2O)		
			Per ft. of 3/4" Pipe	Entrance and Exit	Additional/Ft.
500	1.0	1.000	40	65	15.5
750	1.5	1.016	87	140	32.0
1000	2.0	1.028	148	245	52.5
1250	2.5	1.038	224	375	79.5
1500	3.0	1.045	315	500	109.5
1750	3.5	1.051	415	680	148.0
2000	4.0	1.057	535	870	188.0
2250	4.5	1.062	670	1090	233.0
2500	5.0	1.067	810	1300	288.0
3000	6.0	1.074	1120	1825	395.0

\* On a completely designed system where the flow rate is known, the capacity at that flow rate may be obtained by multiplying the corresponding "CW" factor times the capacity at the standard 500 lbs./Hr. flow rate. Otherwise, use the 500 lbs./Hr. rating.

Pressure drop of Snug Baseboard Panels may be obtained at any of the above listed flow rates by adding the entrance and exit drop to the panel length in feet times the additional drop per foot.

Example of above table use:  
 A 24 foot #9 Snug Baseboard Panel will be operating with 190°F average water temperature at a 2500 Lbs./Hr. flow rate. What is the expected capacity? What is the expected pressure?

$$\begin{aligned} \text{Capacity} &= (15,360) (1.067) = 16,389 \text{ BTU/Hr.} \\ \text{Pressure Drop} &= 1300 + (24) (288) \\ &= 1300 + 6912 = 8212 \text{ millinches H}_2\text{O} \\ &\text{or } \frac{8212}{12000} = 0.684 \text{ ft. H}_2\text{O} \end{aligned}$$

## Assembly Table

Snug Baseboard Panels are shipped assembled ready to install in lengths of 6' or less. All longer panels are shipped in two or more assemblies. All panels from 6 1/2' to 12' are shipped in two assemblies; panels from 12 1/2' to 18' in three assemblies and panels from 18 1/2' to 24' in four assemblies.

All 5 1/2' left subassemblies consist of one 18" left-hand leg section and two 24" intermediate sections. All 6' left subassemblies consist of one 24" left-hand leg section and two 24" intermediate. All 6' center subassemblies consist of three 24" intermediates. Right subassemblies consist of either a 24" or 12" right-hand leg section and the required number of 24" intermediates.

## Accessories: Accessory packages are included with complete units.

Metal Extension—6' Matched

Easy Angle Connector—  
4" & 10" Inside Corner

Metal Extension—3' Plain

Plain Enclosure—  
5 1/2" & 10"

Valve Enclosure  
With Door

Transition Piece—  
Left & Right

Inside Corner Cover—  
4" & 10"

Splice Piece

Outside Corner Cover

End Cover—  
Left & Right

### Other Accessories:

- Hanger
- Metal Extension
- Assembly Clamp
- Lever Type
