

Industrial...

Mill-Rose is the largest U.S. manufacturer of twisted-wire brushes and the undisputed world market leader for brushes of all uses. Brushes are what we know; big ones, little ones, produced in large or small volumes. We design, engineer, manufacture and deliver brushes in any quantity, catering to customer's specific needs.

We've been setting the standard for quality, performance, and innovation in brush technology for over 90 years. Mill-Rose brushes are used in virtually every industry around the world, including, but not limited to, aerospace, agriculture, automotive, defense, energy, manufacturing, medical, technology, and telecommunications.

Choose from thousands of "standard" and "not-sostandard" sizes and shapes of brushes that deburr, polish, finish, sort, auger, conduct, dissipate, collect, move and protect materials. Mill-Rose brushes are often used in nonbrushing applications to solve engineering, design, and production problems. If you require a special or unique brush, we can design it and make it from any material the

job calls for. Mill-Rose has designed more than 100,000 special brushes with unique configurations for unique applications.

Mill-Rose Laboratories...

Mill-Rose Laboratories manufactures a complete line of disposable and reusable brushes, snares and baskets used throughout the medical industry. We're the leading source for laboratory and scientific brushes, biopsy and micro brushes, and stainless steel wire forms used in a broad range of applications. Medical device manufacturers turn to us for our medical machining expertise and value-added service. Our commitment to cutting edge technology, product quality and customer satisfaction is second to none.

Clean-Fit Products....

Strong demand for Mill-Rose brushes by the plumbing, heating and cooling industry led to the formation of Clean-Fit Products, our fast-arowina division serving professional contractors, hardware wholesalers and Do-It-Yourself home centers. Clean-Fit Products offers contractors a complete line of brushes, abrasives, PTFE sealants and specialty tools, including our line of Blue Monster[®] professional-grade products. Clean-Fit Products has experienced explosive growth with its Blue Monster product line, demonstrating the need for high-quality brushes and accessories with a unique and trusted brand name.

Specialized Facilities, Global Coverage

Mill-Rose has manufacturing and warehouse facilities throughout the United States and Mexico. Production facilities in Mentor, Ohio and Mexico feature advanced manufacturing techniques and quality-control programs that ensure unvarying quality. Production is complemented by a U.S. distribution center featuring state-of-the-art inventory management to better serve customers around the world.

Brush Construction

SINGLE STEM -Single Spiral Brush fill bristles are twisted between two (2) stem wires with a single stem wire on each side of the fill wire.

DOUBLE STEM Single Spiral Brush fill bristles are twisted between four (4) stem wires with two stem wires on either side of the fill wire.

DOUBLE STEM -Double Spiral Brush fill bristles are twisted between four (4) stem wires with two (2) layers of fill bristles. Fill bristle layers are perpendicular to each other.

MILL-ROSE

Brush Terminology

A Brush Is A Tool

The purpose of a brush is to clean and/or score a contaminated surface, and the design/selection of the brush is vital to its performance. Mill-Rose brushes effectively balance the following design criteria, maximizing performance and life while minimizing required power:

- Length and diameter of the fill wire.
- Hardness and durability of the fill wire.
- Strength and flexibility (length & diameter) of the stem wire.

For example, Mill-Rose fitting brushes are designed to clean and score the fitting, allowing for a stronger solder joint. These brushes are manufactured with the highest quality fill wire, trimmed so the tip of the wire does the work (scoring).

The scope of this catalog clearly shows the most comprehensive offering in the industry. With Mill-Rose, you do not have to settle for anything less than the exact brush for your job.

| Usage | (Actual) O.D. Fitting Size | (Nominal) I.D. Fitting Size |
|---|--------------------------------------|--------------------------------------|
| First, select the proper brush, referring to the sizing chart. O.D. (actual) sizes are generally specified for refrigeration fittings. I.D. (nominal) sizes are generally specified for plumbing fittings. | 1/4" 3/8" 1/2" 5/8" 3/4" | 1/8" 1/4" 3/8" 1/2" 5/8" |
| Second, always rotate the brush in a clockwise direction when the brush points away from the user. This tightens the brush construction. | 7/8" 1" 1-1/8" 1-3/8" | 3/4" 7/8" 1" 1-1/4" |
| Warning: Reversing a twisted-in-wire brush may loosen the stem wire causing a loss of fill bristles. | 1-5/8" 2-1/8" 2-5/8" | 1-1/2" 2" 2-1/2" |

| | 32 | .0128 | .33 | | | |

Steel Wire

Most power brushes are made with high-carbon tempered steel bristles from 0.0025" to 0.060" in diameter.

- TYPE H.C.: (High Carbon) Steel is generally used where aggressive action and deep cutting action are required. This wire offers maximum strength, recovery and brush life.
- TYPE L.C.: (Low Carbon) Steel is softer wire used for gentle action on softer materials, and for light surface decorating by power brush techniques.

Bristle Materials

Stainless Steel Wire

- TYPE 302: Stainless is highly resistant to corrosion, and should be used in brushing aluminum and stainless steel to prevent unsightly after-rust caused by imbedded carbon-steel bristle particles.
- TYPE 420: Stainless has lower corrosion resistance than Type 302, but produces stronger, more aggressive brushing action and longer brush life. Use where after-rust is not a problem.

Non-Ferrous Wire Aluminum, copper brass, nickel, silver.

Synthetic Bristles

Generally used for brushing and cleaning applications involving corrosive acids and alkalis. Longer life bristle materials include: Nylon, Polyethylene, Styrene, "Herox"[®], "Tynex"[®], Polypropylene, and most other man-made fibers suitable for bristles. Gauges from .0025" to .060" straight or crimped.

Vegetable Fibers

Tampico, bassine, palmetto, palmyra, and other natural vegetable fiber bristles. Tampico is the most commonly used vegetable fiber for scrubbing and washing operations. Treated Tampico is excellent for light deburring and surface finishing operations when used in combination with buffing and deburring compounds.

Silicate

These materials are used for ultra-fine deburring; edge breaking and cleaning; removing sharp edges and metal slivers from drilled/threaded holes and curves.

Aluminum Oxide & Silicon Carbide

Synthetic bristle filaments (Nylon) are uniformly impregnated over the full bristle length with a high-cutting speed abrasive such as aluminum oxide or silicon carbide. These abrasives deliver fast cutting rates with the gentle bristle action of synthetic bristles. Grit sizes: 46-60, 80, 120, 180, 240, 320, 500 and 600.

Wire Forms

Two forms of metal wire and synthetic bristles are available: Crimped

Bristles have full-length crimping that produces softer brushing action and lengthens bristle life by reducing breakage.

Straight

Bristles are straight, not wavy, and deliver a stiffer brushing action.

Safety Requirements:

SAFETY SPEEDS (MSFS): Maximum Safe Free Speed

is the RPM speed at which the brush can be operated spinning free with no pressure applied. MSFS should not be exceeded under any conditions. Consult your local factory representative for proper MSFS.

SAFETY EQUIPMENT: Safety goggles or face shields should be worn by all operators and personnel working in the area of power brush operators.

MACHINE GUARDS: Rotating power brushes should be used only on equipment with safety guards. Keep all machine guards in place.

PRESSURE: Avoid excessive brush pressure when using a power brush. Excessive pressure reduces brush efficiency and its worklife.

STORAGE & HANDLING:

Brushes should not be exposed to high humidity, heat, acid or fumes that might deteriorate wire filaments and cause failure. Do not allow foreign material to accumulate on brush face. Check for distortion that may cause imbalance and excessive vibration.

Custom Designed Brushes

The Mill-Rose Company specializes in designing and manufacturing brushes used in new and unique applications. This may require modifying one of the thousands of standard and not-so-standard brushes we manufacture on a regular basis. If your brush requirement calls for a completely new design, we can design it and make it from any material the job calls for.

You can "Design your own brush" with our user-friendly software, or refer to our "Custom Design Brush Samples" to see some of the diverse sizes and shapes of brushes we manufacture. Many of these are brushes that don't actually brush, so we call them UnBrushes[®]. UnBrushes[®] are used in all types of manufacturing where off-the-shelf brushes simply don't work. UnBrushes[®] solve numerous electrical, mechanical and production problems.

Let Us Build a Brush for You

Hundreds of different Mill-Rose Un-Brush designs are at work, providing unique solutions to designer's needs. Put our 90+ years of brush design/manufacturing experience to work for you. Send us a sketch of the Un-Brush you need or tell us what you want to accomplish and we'll take it from there. Our full-service engineering department will work with you to develop a prototype. Send us E-mail, fax or call toll-free 800.321.3533 to get started.

Grounding Devices

Mill-Rose has designed flexible electrostatic grounding brushes for a broad range of applications, including office copiers, fax machines and computer printers. These long-bristled "un-brushes" dissipate troublesome electrostatic electricity wherever it creates problems.

Reversible Side-Action Honing Tool

Nylon fibers impregnated with aluminum oxide or silicon carbide abrasive hone and polish cylinders and piston housings. May be tapered or configured to hone multiple surfaces at the same time.

Mixing/Screening Device

Used to recover and recycle toner in office copy machines, this agitator separates toner that has a tendency to become compact, and forces it through a screen. Brushes can be used anywhere powder and other materials require agitation.

Continuous Applicator

Lubricants, paint and / or liquids can be applied continuously when fed through a tube attached to a Mill-Rose applicator brush. A wide range of bristle material can be used, depending on the viscosity of the liquid being applied and the liquid's rate of flow.

Static Dissipation

Static dissipating brushes using Thunderon SS-N bristle material are also available from Mill-Rose. This unique fiber dissipates static electricity from computers, copiers, fax machines and electronic circuitry, or anywhere paper, film or fibers are utilized. The exceptional discharge properties of Thunderon SS-N also help prevent accidents caused by electrical discharge.

Custom Designed Brushes

Mill-Rose has designed more than 100,000 special brushes with unique configurations for unique applications. Perhaps one of the brushes in the photo is similar to the brush you require. Call or e-mail us what you want to accomplish, or send us a sketch showing what you need.

Miniature Twisted-Wire Brushes

True miniature brushes, 0.020" to 0.125" in diameter to deburr, clean and slightly ream very small holes and cavities. Can be supplied in a full range of bristle materials...wire and man-made fibers. Sturdy loop handle makes them easy to use. Also available in a full range of diameters in increments .001".

Miniature Abrasive Tube Brushes

Miniature abrasive tube brushes are designed for cleaning and deburring holes drilled in close-tolerance metallic and non-metallic parts. These brushes are flexible, designed to retain their shape better than wire-fill brushes, and will not degrade the diameter, straightness or surface finish of the holes. Silicate and aluminum-oxide brushes are designed for power use. Siliconcarbide brushes can be special ordered.

Series 100 Single-Spiral Tube Brushes For Hand Use...

These small-diameter (1/8" to 1.0") wire brushes are used in hand-cleaning the internal bore of metal tubing, drilled orifices, and other cylindrical cavities in various hard materials. A sturdy twisted wire handle with hand loop enables the hand to grip the brush comfortably and exert pressure to ream the opening for tube cleaning.

FEATURES: Bristles concentric around the handle axis. Uniform density of bristles end to end. Bristles are made of high carbon steel ... also available in stainless, brass, and all stainless steel construction. Complete range of diameters from 1/8" to 1". Larger diameters can also be made.

Single Stem Single Spiral

Series 200 Double-Spiral Tube Brushes...Powered Use

Series 200 Brushes are beefed up to withstand the rigors of being driven by power tools, drills and drill presses. Handles are double-strand heavy-gauge wire, ending in a smooth stem to chuck readily in a power tool. Bristles available: carbon, stainless steel, brass, nylon, silicon carbide and aluminum oxide. Crimped wire bristles can also be supplied in Series 200 power-type brushes.

FEATURES: Bristles concentric around the handle axis. Uniform density of bristles end to end. These brushes can also be made in larger diameters.

ALSO AVAILABLE IN IMPREGNATED NYLON – SILICON CARBIDE OR ALUMINUM OXIDE.

10

Encapsulated Tube Brushes

These heavy-duty tube brushes are encapsulated in an elastomer that supports the wire bristles and provides greater brushing action while extending brush life.

MILL-ROSE

Series 300 High-Density Side Action Type Tube Brushes

Most Effective on Threaded Holes

These side action type brushes have an almost solid concentration of bristles to clean the inner walls of tubes and cylinders. The concentration of bristles provides a high degree of bristle stiffness with almost no flexing of bristles during operation. No bristles are present in the axial end of the brush to clean the bottom of a cylindrical cavity.

Series 300 Brushes are available in sizes from 1/4'' to 1-1/4'' in diameter. The highstrength stainless steel stem can be chucked in any power tool chuck... portable drill, drill press, flexible power cable, etc. Bristles are made of high carbon steel...also available in stainless steel, nylon and brass.

ALSO AVAILABLE IN IMPREGNATED NYLON -- SILICON CARBIDE OR ALUMINUM OXIDE.

Holders

Holders are available for Series 300 Brushes to reduce the bristle trim length slightly and produce stiffer brushing action, while allowing the brush to be driven at higher rpm. Available in two sizes: 1/4" and 3/8" diameters at the slot; 1/4" chuck-end diameter; and 4" overall length.

SAFETY

PRACTICES: Observe all common safety practices, such as wearing goggles, keeping machine guards in place, wearing appropriate protec-tive clothing and operating within speed restrictions. Consult your Factory Representative for proper Maximum Safe Free Speed (M.S.F.S.) pertaining to your particular job requirements.

MILL-ROSE

Series 400 Burr Brushes... power driven

These high-density, single spiral brushes are ideal for cleaning inner bores of tubing and machined cylinders in diameters from 1/4" to 1-1/4". The spiral screw action of the closely packed bristles increases cleaning effectiveness and shortens the time required. Available in carbon, stainless steel or brass bristles in various gauges from fine to coarse. All handles are twisted stainless steel wire for extra mechanical stength and corrosion resistance. Can also be made in larger diameters.

PRACTICES: Observe all common safety practices, such as wearing goggles, keeping machine guards in place, wearing appropriate protec-tive clothing and operating within speed restrictions. Consult your Factory Representative for proper Maximum Safe Free Speed (M.S.F.S.) pertaining to your particular job requirements.

MILL-ROSE

Tube, Bottle And Valve Guide Brushes

For light-duty jobs in applying either wet or dry ingredients or cleansers, these single-spiral brushes are low in cost, long-lasting, and quality-made from top grade bristles with rugged steel wire handles and bristle ties. Made in a variety of natural and man-made fibers, many bristle gauges, and scores of different types. We have something to meet any of your tube brush requirements; hand held or power activated.

MILL-ROSE

Condenser Tube Brushes

Mill-Rose offers a complete line of condenser tube and heat exchanger brushes available in four bristle materials; High Carbon Steel, Stainless Steel, Brass Wire and Nylon. This series of brushes and extension rods has been expanded to include 1/4" diameter brushes. A special 30" extension rod kit has been designed for use with these brushes. Bristle sizes are graduated from .006" on small diameter brushes to .012" on larger sizes to provide consistent cleaning power. All units coded below are of single spiral construction, but are also available in double stem, single spiral as well as double stem, double spiral.

CONDENSER TUBE BRUSHES: 1/8 NPT outside - 5/16-18 internal thread

Copper Center Brushes

These are our very popular, low-cost, small-diameter brushes for light-duty, high-speed cleaning and polishing operations. They have a high-density bristle fill to produce maximum surface contact and brushing efficiency per thousand rpm with either portable or fixed power tools. Available in standard diameters up to three inches.

(These brushes are designed to operate at 20,000 rpm.)

Crimped Wire Wheel Brushes

Precision-formed crimps in each bristle wire of these brushes impart a slight flexing action that produces a more gentle brushing action without reducing the efficiency of the brush in surface cleaning and texturing operations. Slight "knee-action" in the bristles produces some "give" in the wires to soften the impact angle of each wire against the surface being brushed. Available in some sizes in a choice of long or short bristles; the short bristles produce a stiffer action.

ADAPTER

ALWAYS OBSERVE THE FOLLOWING SAFETY PRACTICES

- Never operate Rotary Brushes above recommended safe speed
- Keep all machine guards in place during operation
- Always wear protective eye goggles when working.

MILL-ROSE

Twisted Tuft Wheel Brushes

These brushes are used chiefly in cleaning weld beads, deburring and cleaning machined surfaces and edges, removing flash and sheared edges from sheared or punched sheet metal, and texturing metal surfaces for decorative purposes. Brushes combine highest-quality straight tempered steel wire with maximum twist imparted to provide any desired flexing action in the bristles.

33

Cup Brushes

These brushes are designed for polishing or cleaning large-area flat surfaces and complex convoluted surfaces such as carvings and castings. Heavy-duty brush construction and maximum density of wire help minimize flattening and spreading during use. Can be used flat or as an edging cutter in narrow spaces.
