Remanufactured B20 Compatible Fuel Pumps

P4-199BR

P4-91BR

Why should I use Sid Harvey's remanufactured B20 compatible fuel pumps?

The home heating sector, in many states, is under mandate to include B20 concentration as the new ASTM specification. Sid Harvey's Manufacturing Division believes it is important to provide our customers with superior remanufactured fuel pumps, that are B20 rated to withstand these higher concentrations of biofuels.

What makes Sid Harvey's remanufactured fuel pumps B20 compatible?

To achieve a B20 compatible rating, our standard fuel pumps include the following upgrades: Viton double lip seal, Viton O-rings, Teflon piston seat, a diaphragm and a vulcanized rubber cone valve. We have spent more than a year testing our remanufactured fuel pumps with these upgraded materials, and are confident in their performance under higher concentrations of biofuel.

Are Sid Harvey's remanufactured B20 fuel pumps compatible with Suntec?

Yes! Sid Harvey's P4-91BR remanufactured fuel pump directly replaces Suntec's A2VA-7116B and A2VA-7116 and Sid Harvey's P4-91R.

Sid Harvey's P4-199BR remanufactured fuel pump directly replaces Suntec's A2VA-3006B, A2VA-3006 and Sid Harvey's P4-196R, P4-198R & P4-199R. The functionality of Sid Harvey's BIO rated pumps is identical to their #2 fuel equivalents.
