Environmentally-friendly products that produce,  
distribute and store energy for the most efficient homes.

Roth double-walled oil tanks offer the highest level of safety and environmental protection.

Unique double-walled construction

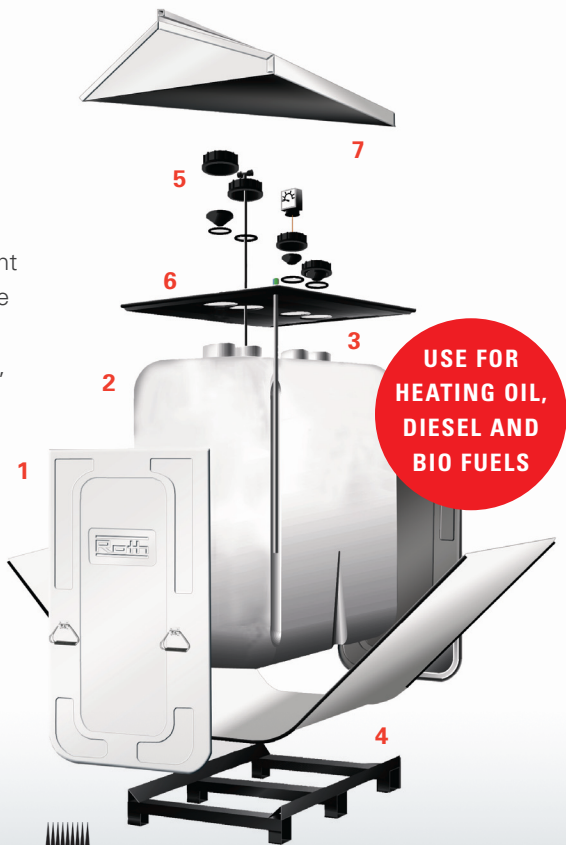

Our uniquely designed oil tanks are the safest and most reliable on the market. The outer tank is made of leak-proof, weld-free galvanized steel and rollseamed with an oil and fire-resistant seal. It can contain at least 110 percent of the capacity of the inner tank for maximum protection. The inner tank is made of blow-molded, high-density, seamless polyethylene that is leak proof and will never corrode. Roth tanks are easier and faster to fill thanks to their unique expansion system, all but eliminating the possibility of spills by home heating oil professionals. And, our compact tanks are available in several different sizes, providing more flexibility for placement in any home.

Built with safety and the environment in mind

Roth oil tanks exceed the industry standard safety regulations. They are rust resistant inside and out and are designed to prevent spills, leaks and fires caused by defective pipes, couplings or fittings located underneath the tank. In fact, it is the only tank on the market with no fittings below the oil line. Each tank undergoes thorough testing, including ultrasound and pressure testing, to ensure optimal thickness and sealing.

Roth Eco DWT PLUS 3 Features

- 1 Weld-free galvanized steel outer tank that can hold 110 percent of the primary tank
- 2 Seamless high-density polyethylene inner tank
- 3 Highly visible optical leak alarm
- 4 Up to 50 percent lighter than a 12-gauge steel tank with larger storage capacity
- 5 Non-corrosive steel filling system that provides an even level in each tank when installed in groups
- 6 Burner feeding system with a Duplex bushing installed directly into the opening. Available with 3/8" or 1/2" compression fittings for copper tubing. Fittings can be removed for a threaded opening of either 3/8" or 1/2". NPT on top and bottom for black iron pipe oil lines.
- 7 Cover for outside use

Say good-bye to worry...

with a Roth state-of-the-art, double-walled heating oil storage tank. The polymer shell is strong and durable, and it won't break down or contaminate your heating oil. The outer shell is constructed of leak-proof and corrosion-resistant galvanized steel. The lock-down, double-ring caps eliminate odor when refilling. Roth heating oil tanks also take up less space — and the oil lines are placed overhead, so there's no risk of tripping and creating an oil leak. Doesn't your family deserve the ultimate in safety?
