

Test and Assess With One Compact Bag

The BG44 Single Strap Bag System is specifically designed to fit the needs of HVACR professionals. It's a smaller and easier bag crafted for the initial call to test and assess a system.

Padded outside pockets keep instruments protected and away from hand tools. A strong and sturdy base keeps the bag upright and not directly on the ground.

The interior tool rack houses hand tools for easy access and quick visibility so missing tools don't get left behind. Special accessories include a magnetic tray, water bottle/ wasp spray strap, electrical tape strap, small plastic tray storage in bottom, and drill holster.

All in a compact bag that fits snugly to the body to fit in tight places like crawl spaces and ladder cages.

- Removable tool organizer for hand tools
- Water resistant material
- Elevated sturdy base
- Magnetic strip to keep screws in one place
- Store small tablet in the padded slip pocket
- Padded outside pockets to protect meters
- D rings to connect accessories
- Compact for tight crawl spaces and ladder cages
